

**Claims**

I claim:

1. A hand-held apparatus for removing stains from fabrics comprising:  
a first handle configured to accept a cartridge containing a stain removal liquid;  
a second handle pivotally coupled to said first handle and configured to accept a  
vacuum cartridge;  
a first workpiece coupled to said first handle and having a stain removal liquid  
exit port; and  
a second workpiece coupled to said second handle and having a vacuum port.
2. The apparatus of claim 1, wherein when said first and second handles are  
compressed, said first and second workpieces are directed proximate to one another.
3. The apparatus of claim 2, wherein when said first and second workpieces are  
proximate to one another, said stain removal liquid exit port is proximate to said vacuum  
port.
4. An apparatus for removing stains from fabrics comprising a first handle, said first  
handle containing a stain removal liquid and a first fabric area and a second handle coupled  
to said first handle, said second handle having a first pressure cartridge and a second fabric  
area.
5. The apparatus of claim 4, wherein said first handle further comprises a stain  
removal liquid exit port.
6. The apparatus of claim 4, wherein said first handle further comprises a pressure  
port.
7. The apparatus of claim 4, wherein said first pressure cartridge contains a positive  
pressure.
8. The apparatus of claim 4, wherein said first pressure cartridge contains a vacuum.

9. The apparatus of claim 7, wherein said first handle further comprises a second pressure cartridge, said second pressure cartridge containing a vacuum.

10. The apparatus of claim 8, wherein said first handle further comprises a second pressure cartridge, said second pressure cartridge containing a positive pressure.

11. The apparatus of claim 8, further comprising a pressure port filter which prevents material from leaving said pressure cartridge after entering said cartridge.

12. An apparatus for removing stains from fabrics comprising:  
a first handle configured to accept a stain removal liquid;  
a second handle pivotally coupled to said first handle and configured to provide a pressure;  
a first workpiece coupled to said first handle and having a stain removal liquid exit port; and  
a second workpiece coupled to said second handle and having a stain removal liquid intake port.

13. The apparatus of claim 12, wherein when said first and second handles are compressed, said first and second workpieces are directed proximate to one another.

14. The apparatus of claim 13, wherein when said first and second workpieces are proximate to one another, said stain removal liquid exit port is proximate to said stain removal liquid intake port.

15. The apparatus of claim 12, wherein said provided pressure is a positive pressure.

16. The apparatus of claim 15, wherein said first handle is further configured to provide a negative pressure.

17. The apparatus of claim 13, wherein said provided pressure is a negative pressure.

18. The apparatus of claim 17, wherein said first handle is further configured to provide a positive pressure.

19. An apparatus for removing stains from fabrics comprising a first handle, said first handle containing a stain removal liquid and a first fabric area, and a second handle coupled to said first handle, said second handle having a pressure cartridge and a second fabric area.

20. The apparatus of claim 19, wherein said first handle further comprises a stain removal liquid exit port.

21. The apparatus of claim 19, wherein said first handle further comprises a pressure port.

22. The apparatus of claim 19, wherein said pressure cartridge contains a positive pressure.

23. The apparatus of claim 19, wherein said pressure cartridge contains a vacuum.

24. The apparatus of claim 23, further comprising a pressure port filter which prevents material from leaving said pressure cartridge after entering said cartridge.

25. A stain removal system for aiding in removing stains from a fabric article having a first side and a second side, comprising:

a stain removal delivery device including a stain removal liquid;

a stain removal liquid applicator; and

a stain removal liquid extractor, wherein said applicator and extractor cooperate to cause the passage of said stain removal liquid from the first side to the second side of said fabric.
